# Social

The scope for calculating social data is the Tokyo Electron group (28 consolidated companies), and the calculating period is fiscal year 2021 (April 1, 2020 to March 31, 2021). Japan: Tokyo Electron Ltd., and six consolidated subsidiaries (including Tokyo Electron Technology Solutions Ltd., Tokyo Electron Kyushu Ltd., Tokyo Electron Miyagi Ltd., and

Overseas: 21 consolidated subsidiaries (including Tokyo Electron America, Inc., Tokyo Electron Europe Ltd., Tokyo Electron Korea Ltd., Tokyo Electron Taiwan Ltd., TokyoElectron (Shanghai) Ltd., and Tokyo Electron Singapore Pte. Ltd.)

# Composition of Employees

	Other	8	8	15	18	28	-	
	Scope 14 emissions (kt-CO <sub>20</sub> )	9	8	15	16	17		

1 Scope 1: Direct GHG emissions from use of fuel and gas owned or controlled by TEL Calculation method: Emissions =  $\Sigma$  (fuel consumed × CO<sub>2</sub> emission factor)

Emission factor based on Japan's Act on Promotion of Global Warming Countermeasures 2 Scope 2: Indirect GHG emissions from use of electricity purchased by TEL

Calculation method: Emissions =  $\Sigma$  (purchased electricity × CO<sub>2</sub> emission factor)

Adjusted emission factors for the electrical power providers concerned based on Japan's Act on Promotion of Global Warming Countermeasures were used as the emission factor for Japan

Emission factors based on values from the Emissions Factors 2019 edition published by the International Energy Agency (IEA) were used as the emission factor for overseas electricity consumption 3 Scope 3: Emissions from corporate value chains (excluding scope 1 and 2 emissions), such as product transportation, employee business travel, and major outsourced production processes The entire scope is divided into 15 categories, of which calculations were made for categories 1, 2, 3, 4, 5, 6, 7, 9, 11, and 12. Calculations for categories 8, 10, 13, 14, and 15 were not made as they are either not

included in TEL's activities, or have already been included in other categories. 4 Scope 1: Non-energy-derived CO<sub>2</sub> and greenhouse gases other than CO<sub>2</sub>

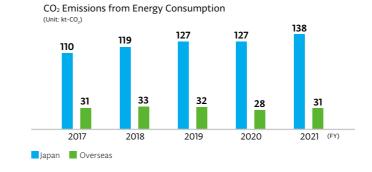

Calculation method: Emissions =  $\Sigma$  (consumption × emission per unit consumption – amount recovered and properly treated) × global warming factor Global warming factor is based on Japan's Act on Promotion of Global Warming Countermeasures

# Independent Practitioner's Assurance Report

June 28, 2021

Mr. Toshiki Kawai. Representative Director, President & CEO, Tokyo Electron Ltd.

> Masahiko Sugiyama Representative Director Deloitte Tohmatsu Sustainability Co., Ltd. 3-2-3, Marunouchi, Chiyoda-ku, Tokyo

We have undertaken a limited assurance engagement of the CO<sub>2</sub> Emissions from energy consumption in Japan, the Water consumption in Japan, Female managers percentage in Japan and Annual paid leave take-up rate in Japan indicated with for the year ended March 31, 2021 (the "Sustainability Information") included in the "TOKYO ELECTRON SUSTAINABILITY REPORT 2021" (the "Report") of Tokyo Electron Ltd. (the "Company").

The Company's Responsibility

The Company is responsible for the preparation of the Sustainability Information in accordance with the calculation and reporting standard adopted by the Company (indicated with the Sustainability Information included in the Report). CO<sub>2</sub> quantification is subject to inherent uncertainty for reasons such as incomplete scientific knowledge used to determine emissions factors and numerical data.

Our Independence and Quality Control
We have complied with the independence and other ethical requirements of the Code of Ethics for Professional Accountants issued by the International Ethics Standards Board for Accountants, which is founded on fundamental principles of integrity, objectivity, professional competence and due care, confidentiality and professional behavior. We apply International Standard on Quality Control 1, Quality Control for Firms that Perform Audits and Reviews of Financial Statements, and Other Assurance and Related Services Engagements, and accordingly maintain a comprehensive system of quality control including documented policies and procedures regarding compliance with ethical requirements, professional standards and applicable legal and regulatory requirements.

Our Responsibility

Our responsibility is to express a limited assurance conclusion on the Sustainability Information based on the procedures we have performed and the evidence we have obtained. We conducted our limited assurance engagement in accordance with the International Standard on Assurance Engagements ("ISAE") 3000, Assurance Engagements Other than Audits or Reviews of Historical Financial Information, issued by the International Auditing and Assurance Standards Board ("IAASB"), ISAE 3410, Assurance Engagements on Greenhouse Gas Statements, issued by the IAASB and the Practical Guideline for the Assurance of Sustainability Information, issued by the Japanese Association of Assurance Organizations for Sustainability Information in Included inquiries, observation of Proceedings of Proceedings of Sustainability Information included inquiries, observation of Proceedings of Sustainability Information and included inquiries, observation of Proceedings of Sustainability Information and Included Inquiries, observation of Proceedings of Sustainability Information and Included Inquiries, observation of Proceedings of Sustainability Information and Included Inquiries, observation of Proceedings of Sustainability Information and Included Inquiries, observation of Proceedings of Sustainability Information and Included Inquiries, observation of Proceedings of Sustainability Information and Included Inquiries, observation of Proceedings of Sustainability Information and Included Inquiries, observation of Proceedings of Sustainability Information Information

processes performed, inspection of documents, analytical procedures, evaluating the appropriateness of quantification methods and reporting policies, and agreeing or reconciling with underlying records. These procedures also included the following:

- Evaluating whether the Company's methods for estimates are appropriate and had been consistently applied. However, our procedures did not include testing the data on which the estimates are based or reperforming the estimates.
- Performing interviews of responsible persons and inspecting documentary evidence to assess the completeness of the data, data collection methods, source data and relevant assumptions applicable to the sites.

The procedures performed in a limited assurance engagement vary in nature and timing from, and are less in extent than for, a reasonable assurance engagement. Consequently, the level of assurance obtained in a limited assurance engagement is substantially lower than the assurance that would have been obtained had we performed a reasonable assurance engagement.

### Limited Assurance Conclusion

Based on the procedures we have performed and the evidence we have obtained, nothing has come to our attention that causes us to believe that the Sustainability Information is not prepared, in all material respects, in accordance with the calculation and reporting standard adopted by the Company.

The above represents a translation, for convenience only, of the original Independent Practitioner's Assurance report issued in the Japanese language.
